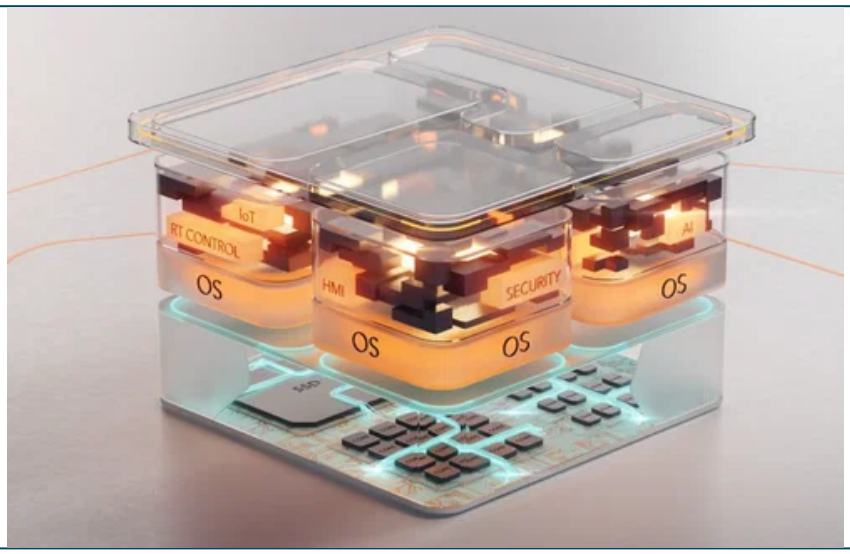
INTRODUCING AREADY.COM –THE APPLICATION-READY COMPUTER-ON-MODULES FROM CONGATEC.



Explore high-performance embedded building blocks that drive efficiency, performance, and adaptability from COM to cloud, revolutionizing embedded computing designs.

For the evaluation of the aReady.COM portfolio, customers can currently choose between two computer-on-modules on the basis of the COM-HPC standard: The COM-HPC conga-aCOM/mRLP Mini Module and the performance-oriented COM-HPC conga-aCOM/cRLP Client Size A Module, both based on the 13th Generation Intel Core processor series (code name "Raptor Lake"). Their software building blocks are application-ready and can be freely combined/configured to provide customers with an adapted subsystem which is precisely tailored to their specific requirements. The current portfolio includes the hypervisor for system consolidation, the IIoT software for device management, security, multi-site networking and databases, as well as the complete Bosch Rexroth ctrlX OS ecosystem. congatec will be progressively expanding this portfolio.
