

4.3" HIGH-RESOLUTION TFT-LCD MODULE – THE LATEST MEMBER OF THE ACT I³ SERIES

The new 4.3" module now also offers this high-resolution display and thus makes it possible to use the same user interface unchanged for three modules.

The four display sizes of the ACT I³ series – 3.5", 4.3", 5.0" and 7.0" – are easily interchangeable with each other thanks to the compatible interface cable. Until now, however, only the variants in 5.0" and 7.0" were equipped with a resolution of 800x480.
