

BRAND NEW WI-FI 6 MCU SERIES

The GD32VW553 series Combo Wireless MCU based on the RISC-V core supports Wi-Fi 6 and Bluetooth LE 5.2 wireless connectivity.

It features advanced Radio Frequency Integrated Circuits (RFIC), enhanced security mechanisms, generous storage capacity, and a wide range of universal interfaces. Leveraging a mature process platform and cost-effective optimization, it consistently delivers solutions for market applications demanding efficient wireless capabilities. The new product lineup offers eight different models. GigaDevice is now accepting requests for samples and evaluation boards in two compact package options: QFN40 and QFN32.
